1 GENERAL INFORMATION

1.1 FEATURES OF KR SERIES

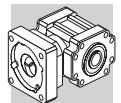

Bevel helical units type KR, manufactured under the most stringent quality specifications, are designed for dynamic and accurate applications where light weight and space effectiveness are a factor.

Many options can be selected from the catalogue as far as motor adapters and output shaft configurations that facilitate the installation on the driven equipment.

- Available in one only backlash option ($\varphi_s = 8'$)
- Single reduction: ratios $i = 1, 2, 5$
- Radial ball bearings are of standard supply, while taper roller bearings can be optionally specified for particularly demanding loading conditions
- Degree of protection IP65
- Oil seals from Viton® compound as standard
- Max. noise level $L_P \leq 70$ dB(A) @ $n_1 = 3000$ min⁻¹
- Units are factory charged with synthetic lubricant suitable for operation at ambient temperatures in the range 0°...40°C. The lubricant quantity is affected by mounting position, that therefore will have to be specified at the time of ordering. In the absence of contamination lubricant does not require periodical changes.

The type of lubricant, whether grease or oil, depends on type of duty, as charted below:

duty	KR 10 ... KR 40
S1 (continuous)	synthetic oil viscosity ISO VG 220
S5 (intermittent)	NLGI grease consistency 00

4.2 MACHINE SHAFT

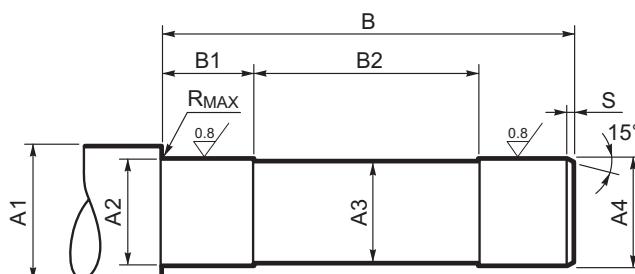

Pivot of driven equipment should be made from high grade alloy steel. Table below shows recommended dimensions for the Customer to consider when designing mating shaft. A device retaining the shaft axially is also recommended (not shown). The number and size of relative tapped holes at shaft end depend on application requirements.
